I ended up finding this Since I don't know Chinese I used google translate to painstakingly find out that I could not view the authors attachment due to lack of registration. Continuing to use the translate I registered and was able to acquire this document You'll notice that the page count and page 2 of the pdf is identical to the page cached on google for laptopschematic.com. Don't know if it's what I need or you need, but it seems to fit the bill so far. I wanted to share my good fortune since it was free for me. I just realized that maybe my original post might be suspect. However, the way I rationalize it is that the mobo was made in communist china and I found the link on a chinese website. So if the website there has let it remain available, then it's probably ok. I did read the translated rules before joining and there was a lot of extra stuff you'd not normally have to deal with, stuff about pretty much not bringing shame to the motherland.

So if they haven't removed this individual's post there and sent him to siberia yet then I feel no guilt in my actions. Not only that, I'm cheerfully passing along my hard efforts to anyone else that may benefit from my manic tunnel vision quest. Not trying to make money here, just fix my darned computer. If my attachment does get removed, so be it, at least the motivated people will have an idea how to go about getting this info. Now I'm just waiting for somebody to show me some other place that was way easier to find the info and make me and my efforts look like a jackdonkey.
