concept solarglo cooker manual

The indicates of screen change all the time, and I don't know what happens with the cooker. Please inform me what to do. Thank you! I do not know how to turn on the two ovens. So far I have been in luck by just pressing all of the buttons and the main fan oven has worked. Grill not working. Elements seem ok as top oven works fine. Any ideas gratefully accepted! Thanks in anticipation. The grill controllers don't normally get faulty as they generally last a lot longer than the elements. It's a Creda concept solar plus with a ceramic hob. Answer questions, earn points and help others. I have the 48643 model. Today there was an interruption in the power supply and now the oven won't come on. It says in the manual that to make the oven come on, you have to set the time of day first. Is there a RESET button anywhere. With the use of the oven, the cooker is virtually useless. I only have the use of two of the four rings on top two of them stopped working ages ago I think I liked the futuristic look of it I have some baking planned so it looks like a trip to Currys for a new cooker. The two rings died because a huge crack appeared, running through both of the rings. I don't know how that happened, because nothing was dropped onto it. It says in the manual that to make the oven come on, you have to set the time of day first. Is there a RESET button anywhere. It's possible that when the power came back on, it was glitchy and put the electronics in a funny state. Another possibility is that one or more of the buttons you are pushing is not operating correctly. <http://gdctogo.com/mae/mm/93-eagle-summit-repair-manual.xml>

What sort of buttons are they. It's possible that when the power came back on, it was glitchy and put the electronics in a funny state. Another possibility is that one or more of the buttons you are pushing is not operating correctly. What sort of buttons are they. I hope this is technical enough for you. I hope this is technical enough for you. Switches that are protected by a waterproof membrane need to be disassembled. Other types you might get away with squirting some isopropyl alcohol in and repeatedly pressing the switch quite hard often works for remote controls. But that might not be the problem at all, of course. Try the power cycle first. Either one of the buttons has failed or the relay on the clock unit has blown. No need to replace the clock though, get an engineer in to bypass the clock unit and everything will work regardless of whether the time is set or not, should cost you no more than 50. Well pleased with the service. I fitted lots of this make of regulator during my many years working as an appliance repairs electrician and can vouch for their reliability. Thanks to E Spares for great service. Can't really assess quality or value until we see how long it lasts! It may be possible to buy it a little cheaper but overall, very good value for money. I don't like electric and wiring but figured it out. Attach the link wire supplied P1 to S1, connect the old 2 to the new 2 white, 4 to 4 black P1 to P1 red, P2 to P2 yellow and then comes the tricky bit, what to do with S2. Well I figured as there is no connection to S2 on the old one it didn't need it on the new one. Basically the terminals have the same names but they are in different positions and the orientation is different. If you are clever enough to get the cooker apart then you can do this yourself. Other cooker models may have different colored wires so check carefully.

Product arrived promptly, wish there were instructions, have always used spares and always will. Getting the old regulator out and the new one in is pretty straightforward. Only issue is that the terminals on the original and this replacement are different. The part does come with a wiring diagram of sorts, but it isn't the easiest to grasp for anyone who isn't switched on. I would prefer to see a photo image of the old and replacement part with lots of arrows to explain what goes from where to where. Once fitted it works a treat. Since using it the handle has come off twice while in use, luckily without disastrous consequences i.e. dinner on the floor. Don't think the handle fitting is very good. I didn't say it was better than expected. It is of reasonable quality and good value for money. Cancel Thanks, we'll look into this. All Rights Reserved.
